Requirements table

Problem Statement 40: Student Startup Crowdfunding Platform

Name : Pulla Jagadeeshwar Reddy SRN : PES1UG24CS347

Requirement_ID	Type	Description	Priority	Acceptance Criteria	Rationale
FR-01	Functional	The system shall collect backer pledges and disburse funds to the student venture in tranches only upon verification of predetermined project milestones.	High	Pass: Milestone evidence reviewed and tranche released. Fail: Campaign funds disbursed without milestone sign-off.	Protects backer funds and ties disbursement to demonstrated progress — the platform's core trust mechanism.
FR-02	Functional	The system shall allow a Student Founder to create a campaign profile consisting of a funding target, a milestone schedule and at least one backer reward tier.	High	Pass: Campaign is published only after funding target, one or more milestones, and one or more reward tier are all completed. Fail: Campaign is published with a missing funding target or zero milestones.	A complete campaign definition is a prerequisite for informed backer pledges and for enforcing milestone-based release later.
FR-03	Functional	The system shall allow a Campaign Backer to select a reward tier and shall require the pledge amount to meet or exceed that tier's minimum contribution before payment is processed.	Medium	Pass: A pledge below the selected tier's minimum is blocked with an on-screen prompt. Fail: A pledge below the tier minimum is accepted and confirmed.	Keeps reward fulfilment financially viable for the student venture and avoids under-funded reward commitments.
FR-04	Functional	The system shall allow a Student Founder to submit milestone evidence (progress report, receipts, or demo link) for a specific milestone and route it to the assigned Faculty Committee for review.	High	Pass: Submitted evidence appears in the committee's review queue within 5 minutes, marked "Pending Review". Fail: Submitted evidence is not visible to any reviewer.	Formal, auditable evidence submission triggers the platform's core verification-before-release workflow.
FR-05	Functional	The system shall allow a Faculty Committee member to approve or reject submitted milestone evidence and shall notify the Student Founder and all backers of the decision within 24 hours.	Medium	Pass: Decision is timestamped in the log and notifications reach the founder and backers within 24 hours. Fail: A decision is recorded but no notification is sent.	Timely, transparent decisions maintain backer trust and give founders a clear path to remediate a rejection.
NFR-01	Non-Functional	The payment processing gateway must comply with PCI-DSS guidelines with tokenized payment authorizations.	High	Pass: Benchmarking tests confirm target latency and security standards under simulated peak load.	Card/wallet handling legally requires PCI-DSS compliance and protects backer financial data.
NFR-02	Non-Functional	The system shall maintain at least 99.5% uptime and a 95th-percentile page response time under 2 seconds, while supporting at least 2,000 concurrent users during a campaign launch window.	Medium	Pass: Load-test report shows ≥99.5% uptime over a rolling 30-day window and <2s 95th-percentile response time at 2,000 simulated concurrent users. Fail: Uptime drops below 99.5% or response time exceeds 2s under the simulated load.	Campaign launches and milestone deadlines cause traffic spikes; downtime or lag directly risks lost pledges and missed funding targets.
