Use Case Flow Specification

Problem Statement 40 : Student Startup Crowdfunding Platform

NAME : Pulla Jagadeeshwar Reddy **SRN : PES1UG24CS347**

Use Case : UC-07 Review Milestone Evidence (extended by UC-08 Disburse Fund Tranche)

Primary Actor : Faculty Committee

Secondary Actors :

- Student Founder : submits evidence, receives outcome
- Campaign Backer : notified
- Payment Gateway : system, executes payout

Related Requirements :

- FR-01
- FR-04
- FR-05

Pre-conditions :

- The campaign is active and has at least one milestone whose due date has been reached.
- Backer pledges for the associated funding tranche have already been collected and are held in escrow.
- The Faculty Committee reviewer is authenticated with reviewer-level access.

Post-conditions :

- Success: The milestone is marked "Completed", the fund tranche is disbursed to the founder's verified payout account, and all backers are notified.
- Failure: The milestone is marked "Rejected", the fund tranche remains locked in escrow, and the founder is notified with the reason.

Main Success Scenario :

1. Student Founder opens Milestone Management and selects the milestone due for verification.
2. System displays the milestone's requirements checklist and required evidence types.
3. Student Founder uploads milestone evidence (progress report, receipts, or a demo link).
4. System validates that all required evidence fields are attached and time-stamps the submission.
5. System places the submission in the Faculty Committee's review queue and notifies the assigned reviewer(s).
6. Faculty Committee member opens the queue and inspects the evidence against the milestone's acceptance criteria.
7. Faculty Committee member marks the milestone "Approved" and submits a digital sign-off.

8. System calculates the tranche amount due per the campaign's funding schedule and sends a payout instruction to the Payment Gateway (UC-08: Disburse Fund Tranche).
9. Payment Gateway confirms the transfer of funds to the Student Founder's verified payout account.
10. System updates the milestone status to "Completed", records the transaction in the audit log, and notifies the Student Founder and all backers of the tranche release.
11. Use case ends successfully.

Alternate Flow : milestone evidence rejected

1. Faculty Committee member marks the milestone "Rejected" and enters mandatory comments describing the missing or insufficient evidence.
2. System keeps the associated fund tranche locked in escrow and notifies the Student Founder of the rejection reason.
3. Student Founder revises and resubmits milestone evidence within the campaign's grace period (e.g., 7 days).
4. If no resubmission arrives within the grace period, System flags the campaign for admin review and pauses further tranche releases until resolved. Otherwise, the flow resumes at Main Success Scenario step 6.
